
WATERCARE MINING

7 December 2017

Attention Prospective Graduates:

Opportunity for Employment of a Process, Mechanical & Electrical Engineers in the Water Treatment Industry

The Watercare Mining team has been active in the care of water in mining and heavy industry for over 35 years. Watercare Mining contributes to its continual growth and success of its business base in the following fields:

- **Chemical conditioning** of process waters by addition of chemicals.
- **Outsourced operation and maintenance** of water treatment systems and plants.
- **Plant and Equipment Supply:** Watercare Mining supplies a range of equipment as an Original Equipment Manufacturer (OEM) and where appropriate partners with selected fabricators.
- **Effluent treatment and water reuse.** Watercare Mining believes that a combination of technologies is required to solve complex and variable effluent problems. Watercare Mining supplies solutions that combine filtration, ion exchange, membrane and precipitation technology for cost effective and sustainable systems. Currently, we operate over 7 different water treatment plants, treating up to 77ML/day to various standards.
- **Reagent Recovery and Recycle.** Watercare Mining designs and supplies recovery systems for the recovery and purification of reagents such as cyanide, caustic and acids.

The applicant will be required to be involved in all fields mentioned above, and the exact role can be defined further. It would be favourable if the interested applicant is a vibrant individual, willing to put the effort into their career and the company, has a strong business mind and a passion for water treatment.

Any interested individuals are asked to email their CV to cvs@watercaremining.co.za
– Subject Line: **Graduate Application**
