

Software Developers

Netelek, a major supplier of Utility Management Hardware and Software systems, is looking to expand its Software Development section, situated in the historic section of Paarl. Netelek's in-house software development section has been responsible over the last 18 years for the development, maintenance, and support of a full suite of management software, including Metering Management, Billing, Revenue Management, Task/Issue Management and all other functions needed by a typical Utility Service Provider.

Netelek needs to urgently appoint experienced Software Developers that meet the requirements as set out below. The successful candidate(s) will be working in a Linux environment developing Single Page applications consuming Rest web services.

Basic requirements:

- Degree or Diploma in software development
- 5+ years of Java experience in application design, software development, maintenance and delivery
- Strong experience with Web architecture and Web Services
- Strong relational database experience, preferably MS SQL
- Strong HTML/CSS/JavaScript experience

Skills in any of the technologies below will be an advantage:

- JAVA Enterprise Edition and all its components
- Hibernate/JPA JDBC
- SVN and code repository management
- MVN
- JBoss, Tomcat or Glassfish
- Rest Web Services JAX-RS
- HTML5, CSS3, JavaScript (jQuery, Ajax),
- NetBeans IDE
- Knockout web framework (Single Page Applications) (Or any other MVVM/MVC framework)
- SoapUI Testing

Interested individuals may send their CV's to: pieter@netelek.co.za
